5 Investment Lessons from the India Vs Pakistan T-20 World Cup Match

The thrilling match on 23rd October 2022 at Melbourne, Australia has taught 5 investment lessons to the investors.

1. Have Faith.

- ✓ India were 31 for 4 in six overs. But the duo in the fifth wicket partnership had the faith to do the extraordinary. They added 113 runs and helped India cruise the victory.
- ✓ While investing, we get swayed by market ups & downs.
- ✓ Equity markets have historically provided superior returns in the long run vis – a – vis other asset classes. Have faith in the market and follow the investment process to reach your long - term Wealth Creation goals.

2. Stay Resilient.

- ✓ India stayed resilient to the challenges by keeping the scoreboard ticking.
- ✓ Amidst chaos, holding their nerves was the game changer.
- ✓ While investing too, we tend to invest when markets are up and not when they are down.
- ✓ True wealth creation starts in a down cycle and gains momentum in an up cycle.

3. Be Patient & Persistent.

- ✓ When India lost 4 wickets by the sixth over the game had shifted in favour of our opponents. It was the test of patience and perseverance for the next two players as they decided as they decided to go for it ball by ball, over by over.
- ✓ In investing too, if our decisions are driven by emotions of greed and fear we stand to lose on compounding benefits. To create wealth, the mantra is to be patient and invest persistently over decades without falling prey to emotions.

4. All Eyes on the Goal.

- ✓ The Indian team had a choice to keep hitting the big shots and collapse like the top order or stay and fight back.
- ✓ They decided the latter, by stabilising the innings, hitting big only on loose balls and focusing on the goal of 160 runs.
- ✓ In investing too, investors tend to chase funds with the best returns only to repent later as no fund is a consistent performer. The right way is to focus on your goals rather than returns by investing in funds with good pedigree and track record.
- ✓ Remember that form is temporary and class is permanent.

5. It's a Team Effort.

- ✓ While two players did the heavy lifting in India's win against Pakistan, it was a team effort, nonetheless.
- ✓ Our number 8 batsman used his presence of mind in the last over to get a wide and hit the next ball for the winning runs.
- ✓ A diversified investment portfolio across asset classes helps to optimise returns as some asset classes may fall during volatile markets while some may stand tall.

Like in cricket, in investment too, not all days are the same. There would be good and bad phases. We need to participate in both.

Need for Proactive Action in Retirement Planning

A recent study done by India Retirement Index Study (IRIS) reveals the state of urban India for leading a healthy, peaceful and financially independent life. The study determines that the retirement readiness of urban Indians on a scale of 1-100 is only 44. The region-wise indices are North -41, West-46, South-43 and East-51.

The key highlights of this study are as follows:

Instagram twitter
@MonneeyKiBaar

- 1** More than 80% of urban Indians fear they will run out of money in retirement
- 2** 59% of urban Indians believe their savings won't last even 10 years in retirement.
- 3** 29% feel inflation has been the key trigger to start retirement planning.
- 4** A vast majority needs comfortable retirement, but 37% haven't begun retirement planning.
- 5** 86% of respondents above 50 years wished they had started saving for retirement earlier.
- 6** By 2031 India's elderly population is expected to soar by 41% to 194 million
- 7** 39% respondents are relying on their children to take care of them in their later years.
- 8** Support from kids are ill-placed when nuclear families dominate urban culture.
- 9** 79% believe they would be healthy when they retire but only 40% do regular physical activity.
- 10** Awareness about retirement planning is yet to translate into action of proactively investing.

With life expectancy likely to go beyond 90 years, the retirement period is expected to be 30 years or more. Further, as expenses keep rising due to inflation, there is a need to invest in equity oriented products which aim to provide higher inflation adjusted returns on your corpus in the long run. One may therefore look at having a financial advisor who can draw up a holistic retirement plan for you to enjoy sufficient cash flows. It is rightly said that **"YOU CAN BE YOUNG WITHOUT MONEY BUT YOU CANNOT BE OLD WITHOUT IT."**

This study was conducted by Max Life Insurance in partnership with KANTAR. The study covered 3220 participants in the 35-65 age group across 28 cities.
